

Information Technology Services

Have you had any problems with your Microsoft Exchange Servers, SQL Servers, or Domain Controllers lately?

Exchange and other enterprise solutions can be incredibly complex to install & maintain. In many cases, it is necessary to employ an entire staff of individuals to deploy and maintain these solutions. But, finding and retaining qualified individuals to manage these servers can become a full-time job.

Unfortunately, while you search for a new Systems Administrator, your users may experience difficulties. They may complain about the speed or performance of the network, inoperable internet connections, or they may need assistance accessing a mistakenly deleted file. Your whole network is extremely delicate, and dependent on many variables; when something goes wrong, the whole network may fail, thereby negatively impacting your business.

Area Networks has the resources available to eliminate these problems, while lowering your operational expenses. We can manage these complex services, and servers for you, using the *Right Solution*, at the *Right Time* with the *Right People* that have the *Right Skills*. Our experienced professional staff will manage:

- Day-to-day Server Operations
- Installation & Upgrades
- Backups
- Disaster Recovery
- Performance Tuning
- Network Security
- LAN & WAN Networking
- Internet Access
- Virtualization

THE RIGHT SOLUTION

We design an application around your company's business model rather than trying to adapt your business to conform to an "off the shelf" software package. We listen to you, and understand how your operations work, and then devise a solution that is exclusively for you. If you are expanding or modifying your network environment, our Network architects and engineers can also assist you in developing the right configuration for your business.

THE RIGHT TIME

We make sure our specialists assist you only when you need them. To employ a full staff of individuals adds hundreds of thousands of dollars to your company's budget. We provide our professionals to you

on an as needed basis so you don't have to pay unnecessary salaries and benefits. The overall savings will astound you.

THE RIGHT PEOPLE

We recognize your situation and company are unique, and we keep a diverse team of professionals on our staff to address your individual needs. Our Help Desk has the finest Systems Administrators, and our Information Systems Department has top notch System Engineers & Network Engineers trained in HP, Microsoft, VMware and Cisco technologies. Our developers are all trained in the latest Microsoft .NET technologies, VB, ASP, and SQL. Many of today's newest applications are being written for the web instead of the older client server models. If you have a legacy client server application, we have the technology to "web-enable" it to run in a web browser. Even the old "green screen" hosted applications can now take advantage of a web browser's graphical user interfaces.

THE RIGHT SKILLS

In today's society, change is constant. It may be impossible to predict the skill set you will need to have on hand. Our team of specialists has a diverse skill set, and the most up-to-date training. We make sure they have the skills you need, whenever you need them. Our team is trained to use the latest technology to help you achieve your goals.

OUR FACILITY

Do you have servers in your environment that deploy mission-critical applications? What happens when they go down or can't communicate with other components within the critical infrastructure? The entire supply chain is impacted from order taking to manufacturing, and, ultimately, affects the bottom line. Area Networks is well positioned to prevent these disasters. We can bring your servers into our secure, world-class data center, or you can keep them at your facility, and we can manage them remotely. Our Networks Operations Center (NOC) is a state-of-the-art facility with auxiliary support systems. We have redundant computer room air conditioning systems (CRACs), and redundant UPS battery backup systems on site. We also have a secondary power support supplied to the Data Center by a closed cooled diesel generator that, if needed, can be converted to natural gas. Our goal is to keep your business running.

OUR PROMISE

Area Networks specializes in customer service. We recognize that long term customer satisfaction is the only way to excel in today's highly competitive market environment. We assist our customers so they can achieve their information technology goals on time, on budget, and without compromise. Our concern for your solution is evident by our can-do attitude, our availability and persistence with problem solving, and our quick turnaround of your requests. We monitor your systems, networks, and applications twenty-four hours a day, seven days a week. When a problem occurs, we address it immediately (either manually or automatically), usually before you are even aware there is an issue. We provide you with a reliable, secure server environment, and ensure that you can access your email, files, and applications at all times. No matter what the configuration, hardware, or software your company uses, we focus on business continuity.

Let Area Networks bring your company the right solution, at the right time using the right people with the right skills. Let us help you make your network environment stable and secure, and ultimately make your company more efficient and profitable.
