

Area Networks Infrastructure Services

Area Networks was formed in 1999.

We are a full-service Application Service Provider (ASP), providing all the services of a Managed Service Provider (MSP) & an Internet Service Provider (ISP). We provide network services, and develop business applications for customers in Northeast Ohio.

We pride ourselves on our ability to design a business application around your business model rather than requiring you to conform your business to an off-the-shelf software package. We specialize in customer service, and strive to maintain business continuity for you.

Area Networks has many local clients. Since inception, Area Networks has been providing complete network support and application development to Area Temps Inc., an industry leader in the placement of office services and light industrial help in the Greater Cleveland area. We provide services to all of Area Temps' offices in Northeast Ohio.

Area Networks also offers staff augmentation services to support your IT needs. We provide I.T. staffing services to many industries including employment, investment, manufacturing and real estate. See our references for additional industries, and clients that we serve.

Microsoft Network Infrastructure Implementation and Support

Area Networks has a long history in the design, implementation, and support Microsoft & VMware networks. Our certified engineers can support your existing infrastructure, upgrade it to meet emerging business requirements, or design a new network from scratch. This includes building custom servers, connecting to wide area networks, and integrating with enterprise resources that could positively impact our clients.

Microsoft Exchange Server Implementation and Support

With years of experience implementing and supporting Microsoft Exchange Area Networks consultants are prepared to troubleshoot existing Exchange implementations, design new implementations, and upgrade to newer releases to support business requirements. These services can be packaged to include the software licensing, hardware, implementation services, VoIP integration, and ongoing support. Area Networks is prepared to advise its clients regarding the emerging Microsoft Unified Messaging & Communications features of Exchange Server to determine their suitability to customer specific requirements.

Linux & Unix OS Support

Area Networks has provided technical support for Linux based systems. We offer installation, system administration, upgrades, patches, specialized hardware, troubleshooting, and strategic consulting, and can do so for individual challenges or in the form of an annual support contract. This includes experience integrating third party and open source tools, requirements specification, hardware configuration, VMware integration, and product sales.

Linux & Unix Windows Integration

Working with multiple computer vendors can be stressful. Coordinating cross-functional projects and teams is costly and increases risk. S.B. Stone is the “one stop shop” if you have systems running under both Windows and Unix. This includes integrating the systems, upgrades, patches, performance monitoring, and performance enhancement. We can provide these services ad hoc, or as part of a contractual support agreement.

Hardware & Software Sales & Service

Area Networks has long held, deep relationships with firms including HP, Microsoft, VMware, and Cisco. Our products come with full factory warranties. We routinely build custom servers, upgrade LAN & WAN hardware, manage your Microsoft licensing, install and manage firewall, and explore emerging technologies on behalf of our customers. If you are purchasing computer products give us a call and we will supply competitive quotes with real customer service.

Managed Infrastructure Services

Area Networks offers outsourced infrastructure managed services. These include 24/7 x 365 critical device monitoring and patch services, phone support, and vendor management services converting telecommunications, colocation, desktop devices, Broadband, and others. We can free clients to focus entirely on their primary business and unhinge them from the burden of managing multiple technologies and delivery partners.
